

As healthcare in America is changing, Barnabas Health is transforming to maintain its position as a strong and viable healthcare leader for the future. Over the past several months, we have been working collaboratively to transform the healthcare delivery model for the communities we proudly serve. This transformation included merging Monmouth Medical Center and Kimball Medical Center. To reflect this change, Kimball was renamed 'Monmouth Medical Center, Southern Campus' highlighting the synergy and operational connection between both hospitals and medical staffs.

This new network of care between Monmouth Medical Center and Monmouth Medical Center, Southern Campus will provide high-quality, efficient healthcare for the members of the communities in the region.

We are now providing you with enhanced access to Monmouth Medical Center's renowned specialty services, including neurology, oncology and geriatric services, and offering them on an outpatient basis closer to where you live and work. We're also investing \$11 million to upgrade Monmouth Medical Center, Southern Campus. These upgrades feature an expanded Emergency Department including a new Geriatric Emergency Room specially designed to meet the unique healthcare needs of our aging population, and renovations to create all private patient rooms.

The ultimate goal is for you and your family to have access to the very best in preventive medicine in convenient settings closer to home. If you require more advanced care because of a complex illness or injury, the team at Monmouth Medical Center is ready to care for you. This regionalized, two-campus partnerships means we can get you to Long Branch quickly, safely and seamlessly to ensure your healthcare needs are met 24 hours a day, 7 days a week.

Monmouth Medical Center, Southern Campus will continue to be a fully operational community hospital. You will still see many familiar faces – nurses, doctors and hundreds of other dedicated professionals – in the hallways and at our outpatient centers.

For more than 100 years, thousands of families have turned to Kimball and Monmouth Medical Centers for their healthcare needs. But over the last few years our community – and healthcare – has changed. Now we are changing too.

Thank you for your confidence and continued loyalty. Join us as we continue our transformation into Monmouth Medical Center, Southern Campus.

Frank J. Vozos, MD, FACS

President and Chief Executive Officer  
Monmouth Medical Center, Southern Campus

**Expanded Outpatient Services**

Monmouth Medical Center is expanding access to its Centers of Excellence in and around Lakewood. This includes the addition in 2014 of:

- ▶ Monmouth Hematology Oncology Associates including outpatient infusion
- ▶ The Neuroscience Institute for adult and pediatric neurological services
- ▶ High Risk Cancer Assessment Program

Additionally, future plans include the addition of:

- ▶ New Jersey Bariatric and Metabolic Institute for comprehensive weight management services
- ▶ Multispecialty surgical services
- ▶ Outpatient Nephrology Services
- ▶ A pediatric subspecialist from The Unterberg Children's Hospital
- ▶ A Russian medical program
- ▶ Comprehensive Sleep Program
- ▶ Transient Ischemic Attack Program for outpatient treatment of mini strokes

For more information on these services, please contact the LINK at 1.888.724.7123 or visit [barnabashealth.org](http://barnabashealth.org).

**Enhanced Emergency Medicine Services**

Monmouth Medical Center, Southern Campus routinely ranks among the top 5 percent in New Jersey and top 10 percent in the nation in patient satisfaction. That level of excellence will remain as well as the Emergency Department's status as a 24/7 operation.

The hospital opened in January 2014 a Geriatric Emergency Medicine (GEM) Unit in collaboration with Monmouth Medical Center to better address the emergent health care needs of our aging population. Rather than simply address the emergency medical crisis, our multi-disciplinary team will search for underlying issues that may have caused the health problem.

The GEM unit was specially designed away from the main Emergency Department to provide our aging patients with a quieter, more comfortable environment.

The hospital's Pediatric Emergency Services, a collaboration with The Unterberg Children's Hospital at Monmouth Medical Center, will remain with 24/7 access to pediatric consultants at the Children's Hospital.
