Cognitive and Neural Correlates of Action Control in Attention-Deficit/Hyperactivity Disorder

This research study aims to understand how children diagnosed with ADHD control their behavior and choose their actions. It involves completing paper-and-pencil measures, computer-based games and brain magnetic resonance imaging (MRI). No contrast/dyes or injections will be used in the study.

Who's eligible?

Children diagnosed with ADHD OR Healthy children with no prior medical diagnoses

All participants should be:

- ✓ Between the ages of 6 and 10
- ✓ Able speak English well
- ✓ Able to play a computer-based game
- ✓ Able to undergo an MRI scan

Participation in this study will include 2-3 visits to the following Kessler Foundation locations:

- ✓ 120 Eagle Rock Ave, Suite 100, East Hanover, NJ07936
- ✓ 1199 Pleasant Valley Way, West Orange, NJ07052

Participants will be compensated for their time and children who complete the MRI scan are eligible to receive a copy of the images.
