

Multi-Complicated Trauma

Our highly specialized Multi-Complicated Trauma Program provides advanced critical rehabilitation care for children and adolescents from birth to 21 years, who have experienced major or multi-complicated trauma. The range of injuries sustained often include severe trauma to multiple organ systems, resulting in the need for comprehensive rehabilitation.

Our Individualized Approach

Patients admitted to the program following major and/or multi-complicated traumas, are offered an individualized rehabilitation program by an interdisciplinary team including experts in orthopedics, physical medicine and rehabilitation (physiatry), pediatrics, neurology, psychiatry/psychology, and other medical specialties. Additionally, during an inpatient stay, patients follow a plan of care specifically tailored to their needs. Each day, patients work with expert therapists specializing in the treatment of complicated trauma rehabilitation.

Our clinical teams are highly skilled in the rehabilitation of patients in need of:

- Catheter management
- Gastrostomy feedings
- Prolonged intravenous antibiotic administration
- Total parenteral nutrition
- Tracheostomy care
- Ventilator management and weaning
- Wound care

Upon discharge, patients are guided by expert clinical staff of Children's Specialized Hospital and referring acute care facilities on continuing the plan of care. Communication between medical staff and family is ongoing to monitor patient progress. If needed education is provided for caregivers to ensure a seamless transition home.

Treating patients who have sustained complex injuries such as:

- Bowel and bladder trauma
- Lung injuries
- Multiple bone fractures and injuries
- Multiple injuries involving the brain and/or spine
- Trauma to skin and other organs
