

Help researchers better understand how brains function in autism

Kessler Foundation seeks children **aged 5-18** to participate in a collaborative study with Children's Specialized Hospital, led by principal investigator Dr. Helen Genova.

We are seeking **children with a diagnosis of autism** who do not have any additional neurological conditions (e.g., concussion, seizures, ADHD). We are exploring the ways in which different parts of the brain coordinate their function in children with autism.

The study involves completing paper-and-pencil surveys as well as brain scan called MRI. No medications or treatments are involved in this study and no contrast dyes or injections will be used for the MRI scan.

The 2 study visits will be conducted at the Kessler Foundation sites in **East Hanover** (120 Eagle Rock Avenue, Suite 100, East Hanover, NJ 07936) and **West Orange** (1199 Pleasant Valley Way, West Orange, NJ 07052).

Participants in the study will be compensated up to \$200 for their time.

If you are interested in having your child participate in our research, we would like to hear from you!
