

Physical Medicine and Rehabilitation (Physiatry)

When a child experiences challenges with movement, strength, or physical function, the right support can make all the difference in their journey. At Children's Specialized Hospital, our Physical Medicine and Rehabilitation (Physiatry) team is dedicated to helping children restore or improve function and maximizing quality of life.

Coordinated Care

Not only are we improving your access to care, but under the coordination of our physiatrists, our patients will receive the comprehensive care they need all in one place, including:

- Developmental pediatrics
- Occupational therapy
- Psychiatry
- Feeding therapy
- Orthopedics
- Psychology
- Neurology
- Physical therapy
- Speech and language therapy

Conditions Treated:

- Brain or spinal cord injuries or problems
- Excessive drooling, jaw clenching, or open mouth posture
- Bracing, wheelchair, or other equipment needs
- Genetic disorders
- Cerebral palsy
- Hypotonia/floppy muscles
- Developmental delays
- Muscle, bone, joint, or nerve pain (knee, elbow pain)
- Difficulty with walking (toe walking, intoeing) or other functional tasks such as putting clothes on
- Spasticity/tight muscles
