Vascular Screening

Vascular Disease is among the leading causes of death in the US, yet it is one of the most preventable. If left untreated, vascular disease can silently cause major damage. The tests we offer are noninvasive, painless and simple to administer in less than 30 minutes. If you are at high-risk, you should be screened.

High-risk factors may include:

- ▶ Over age 55
- ▶ High cholesterol
- ▶ High blood pressure
- ▶ Obesity
- ▶ Lack of exercise
- ▶ Family history of vascular disease
- ▶ Diabetes
- ▶ Previous heart or leg treatments
- ▶ Smoking

For a flat fee of **\$49**, our Technologists will perform a variety of ultrasound screenings. Including ultrasound for aortic aneurysms and carotid artery disease and a non-invasive measure of blood flow in the legs. The images will be interpreted by our board certified radiologist and a detailed report will be sent to your physician. If follow-up advanced imaging is necessary your physician will be contacted for a prescription and you will be contacted to schedule further testing.
