

At high risk for vascular disease?

Make a plan to schedule a screening.

Thursdays | 9 a.m. to Noon

Monmouth Medical Center Southern Campus

600 River Avenue, Lakewood, NJ 08701

Vascular disease is among the leading causes of death in the US, yet it is generally asymptomatic until a disaster occurs. The tests are noninvasive, painless and simple to administer. They include ultrasound examination for aortic aneurysms and carotid artery disease and a non-invasive measure of blood flow in the legs. Make a plan to schedule a screening.

High-risk factors may include:

- Over age 55
- High cholesterol
- High blood pressure
- Obesity
- Lack of exercise
- Family history of vascular disease
- Diabetes
- Previous heart or leg treatments
- Smoking

Cost: \$49. *(You will be contacted prior to event for payment.)*

Registration for a 30-minute time slot is required.

Please call **732-886-4363** for more information.
