

NEONATAL INTENSIVE CARE UNIT

ABOUT THE NICU

- Level III with 37 beds and physicians available 24/7
- The only neonatology fellowship training program in the state
- Award winning design featuring recessed soundproof ceilings and soft, adjustable lights
- Physicians practice the latest evidence-based medicine, leading nationally recognized NIH-funded research programs to continuously improve care
- Family-centered care with NICU-based lactation consultants

UNIQUE PROGRAM AND SERVICES

- Pioneering the use of non-invasive transcutaneous monitoring to decrease blood drawing (hemoglobin, oxygen, carbon dioxide, methemoglobin)
- Newest forms of gentle and non-invasive neonatal ventilation:
 - High-frequency jet and oscillator
 - Neural-assist ventilation
 - Nasal intermittent ventilation nitric oxide, including trials for new indications of pulmonary hypertension in prematurity
- Neonatal outcomes that consistently exceed regional and national benchmarks
- Active transport service fully equipped for neonatal ventilation and inhaled nitric oxide
- In-house pediatric radiology specialists enable rapid diagnosis and treatment

Critically ill neonates receive advanced, comprehensive care from the state's leading experts at The Bristol-Myers Squibb Children's Hospital at Robert Wood Johnson University Hospital.
