**R**obert Wood Johnson University Hospital (RWJUH) now offers the Gamma Knife Perfexion, a non-invasive tool specifically designed to treat brain tumors and other conditions of the brain and upper spinal cord, without harming healthy surrounding tissue.

Robert Wood Johnson is the only academic medical center in the region to offer Perfexion, which represents the most advanced and accurate generation of this technology.

As the principal teaching hospital for UMDNJ-Robert Wood Johnson Medical School and the flagship hospital for The Cancer Institute of New Jersey, RWJUH is home to the region's widest range of neurosurgical and cancer treatment options, available only at a leading academic health campus.

**G**amma Knife Perfexion, available at RWJ, is the latest version and most precise of the technology and exceeds the performance of previous Gamma Knife versions with:

- Increased patient comfort and reduced treatment times
- Significantly reduced radiation scatter to uninvolved organs
- Fully robotic helmet movement and positioning
