

Jersey City Medical Center Dedicates Serenity Garden and Stained-Glass Artwork as a Tribute to COVID-19 Relief

Jersey City Medical Center (JCMC) has unveiled its new serenity garden and “Healing and Hope” stained-glass artwork designed by local artist Harriet Hyams.

The serenity garden, established through donations from the community, serves as a place of reflection and peace for patients, employees, and neighbors. The garden features a recognition wall dedicated to all who supported the hospital’s COVID-19 Emergency Response, front-line caregivers, and those whose memory they honor.

“We are delighted to unveil our new serenity garden and stained-glass artwork in honor of our COVID-19 response and the support of our community,” said Michael Prilutsky, President and Chief Executive Officer for Jersey City Medical Center. “This beautiful space and artwork will be a source of solitude, respite, and peace for employees, patients, visitors and our community.”

W. Nevins McCann, Partner at Connell Foley, LLP, who donated generously toward the serenity garden said “It was important to my colleagues and I to deliver peace to our community by supporting the creation of a space for patients, visitors and employees and their families. The Serenity Garden was a place of reflection and comfort for me personally during the COVID-19 pandemic.”

WE MADE AN IMPACT TOGETHER

Jersey City Medical Center's TAVR Program Continues To Grow a Year Later

Jersey City Medical Center (JCMC), has grown its cardiovascular service line significantly, including the addition of TAVR (transcatheter aortic valve replacement), an advanced, less-invasive surgical procedure to repair damaged aortic valves, performed as part of RWJBarnabas Health's Structural Heart Disease Program. The Medical Center is the only hospital in Hudson County to perform TAVR.

JCMC's TAVR program has passed its one-year milestone and to-date has successfully performed nearly 80 procedures. TAVR's multidisciplinary team is comprised of cardiac surgeons, interventional cardiologists, nurse practitioners, and the catheter lab team.

"Until recently, we had no option in Hudson County to help people who were too ill to undergo open-heart surgery. With TAVR, we now have an opportunity to help these patients live longer and have a better quality of life right here in Jersey City, close to their home." said Michael Benz, MD, board-certified Interventional Cardiologist and Director of Structural Heart Program at Jersey City Medical Center.

Jersey City Medical Center Unveils New Neuro Interventional Cath Lab.

Jersey City Medical Center will utilize new, state-of-the-art medical technology that enables physicians to view detailed 3D images of the brain and nervous system through the use of an innovative angiographic X-ray lab. The new Neuro Interventional Cath Lab will enhance the diagnosis and treatment of stroke and complex neurovascular diseases such as aneurysms and arteriovenous malformations (AVMs) among Hudson County residents.
